

Largest Divisible Subsets

it is not contiguous

$arr[] = \{1, 16, 7, 8, 4\}$

here largest divisible subset is

$\rightarrow arr[i] \mid arr[j] \neq 0$

or $arr[j] \mid arr[i] \neq 0$

$\{1, 16, 8, 4\} \rightarrow$ why because

$\textcircled{4} \rightarrow \text{Ans}$

$\checkmark \text{div}(1, 16)$ $\checkmark \text{div}(16, 8)$ $\checkmark \text{div}(8, 4)$
 $\checkmark \text{div}(1, 8)$ $\checkmark \text{div}(16, 4)$
 $\checkmark \text{div}(1, 4)$
